# Why Mental Health?

**1 in 5 Indians**  
will suffer from  
depression in their  
lifetime

**Only 0.3**  
psychiatrists per  
1,00,000 people in  
India

**Only 10%**  
people suffering  
from mental illness  
will get help

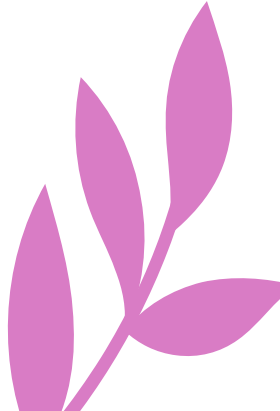

**150 million**  
people across India  
are in need of  
mental healthcare  
interventions both  
short term and long  
term

# The Problem at hand

Mental health is a major concern across the globe and India is no different, as our country has a large population there is a significant burden of mental health diseases. Despite this, there is a lack of mental health services and resources, and most of the people do not have access to quality care even if available. Mental health is something that is often stigmatized and not prioritized, which creates a significant gap in access to care and treatment. Many people with mental health conditions do not receive proper diagnosis or treatment. With this app our focus is to provide treatment and care and reduce the stigma around mental health.

# HOW WE SOLVE IT

We intend to solve this problem by using Virtual and Augmented Reality (AR/ VR) as it has shown potential for use in treating mental health conditions such as anxiety, phobias, PTSD (Post-traumatic stress disorder), depression. Virtual Reality can simulate real-life situations and provide a safe and controlled environment for individuals to confront and overcome their fears and negative thoughts. It can also be used to deliver exposure therapy, cognitive behavioral therapy, and relaxation techniques. VR has also been used for therapy of substance abuse and to enhance mindfulness and emotional regulation. We intend to provide an environment which will cater to the need of the user and thereby aid them. There are numerous research papers present to back up claims of AR's and VR's potential to be beneficial to people's mental health, but nothing concrete has been implemented yet. With SootheSpace, we want to be one of the first ones to have acted on this grave social issue with the help of ground breaking technology!

# Why AR/ VR?

## Immersive state-dependent learning

Through AR/VR, users can experience exact environments that they need to learn to manage their anxiety or fears in.

## Flexibility

People are generally more willing to enter virtual versions of the situations they find anxiety-provoking because they know it's only a simulation. Environments can be personalised and adjusted.

## Taboo

As it is being accessed privately, people will have lesser hesitation in reaching out to people for help. It would rather act as a self-help and self-paced activity

# Primary and Secondary Research

## Our Meeting with a Psychologist

**Link to our conversation recording with our college psychologist:**

[https://drive.google.com/file/d/1F1-jvzkvE9mBj6WfukNnMHZkmu1zTrB2/view?usp=share\\_link](https://drive.google.com/file/d/1F1-jvzkvE9mBj6WfukNnMHZkmu1zTrB2/view?usp=share_link)

## Our research on Mental Health and resources used:

- > Beck Depression Inventory
- > Beck Anxiety Inventory
- > DASS 21 (Depression Anxiety Stress Scales)
- > PGI Health Questionnaire (Patient's Global Impression)

# Our Features

## Virtual and Augmented Reality Therapy

Immersive therapy sessions. Gradual exposure to simulations of feared situations in controlled environments

## Teletherapy

Platform to connect to healthcare providers. They can also monitor the patient's activity

## Resources

Library of awareness resources such as books and podcasts

## AI Personalization

Personalized treatment plans, schedules, feedback. Mood tracker, recommendations, quizzes, progress tracker

## Gamification

Encouraging usage and progress by games and rewards

## Telemedicine

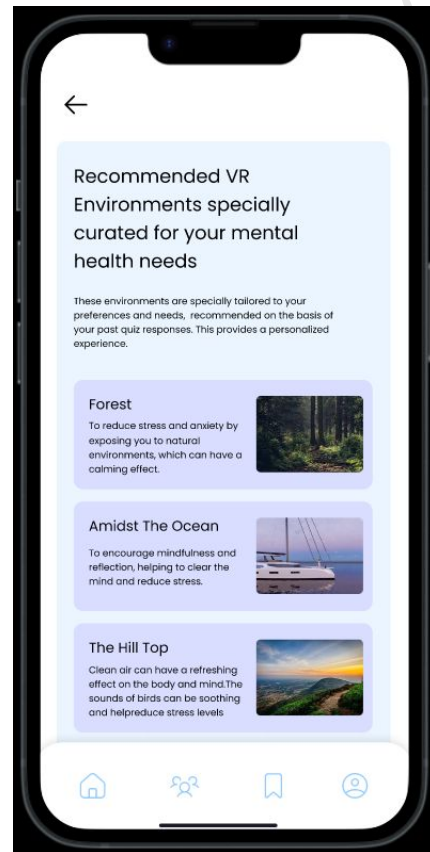

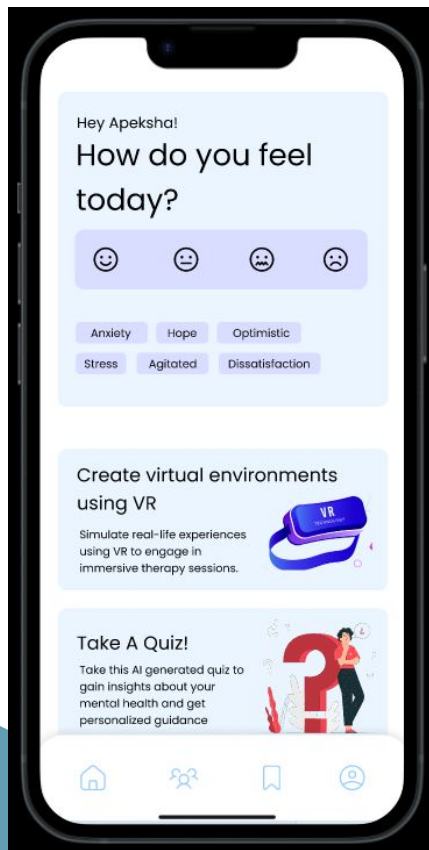

For prescriptions provided by therapists

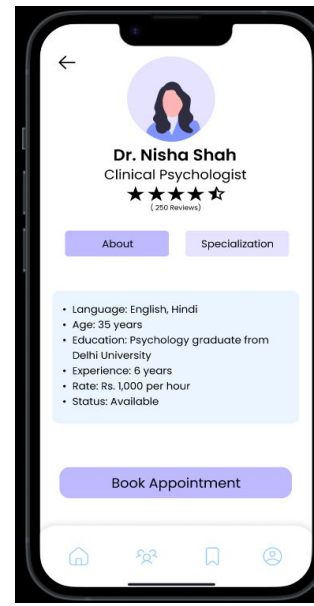

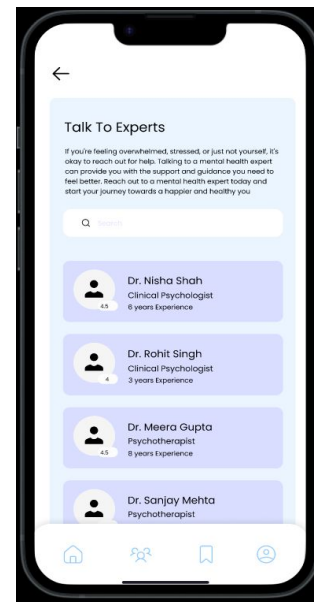

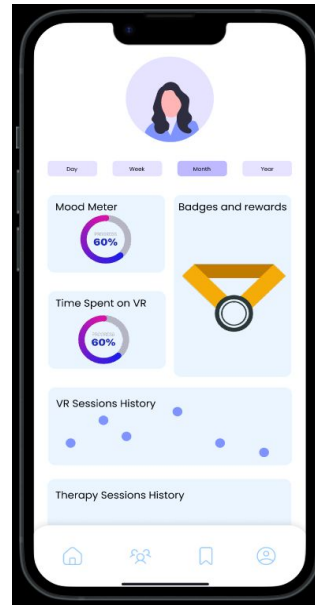

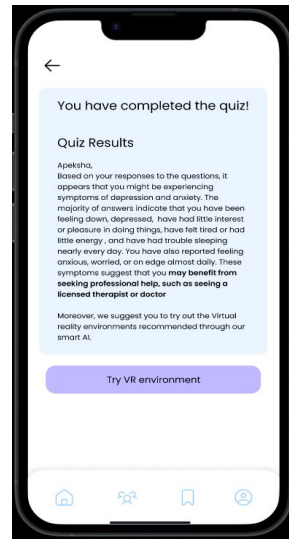

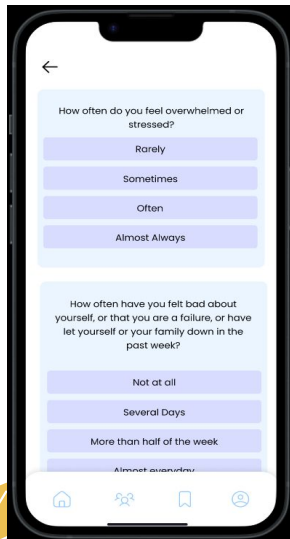

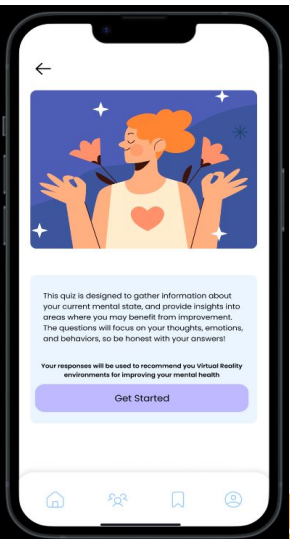

# Our App

(coded in Flutter, designed in Figma)

# AR Application (coded in Swift, magic using Reality Kit )

# How this solves the problem

# Technology Stack

Frontend: Flutter, Figma

AR and VR: ARCore Flutter Plugin, React VR, Swift

AI: TensorFlow, PyTorch

# Scope for modification/ Future Prospects

**Addition of new  
therapeutic  
approaches**

**Use ML, NLP for  
more  
personalization**

**Increase security  
and privacy by  
leveraging  
blockchain**

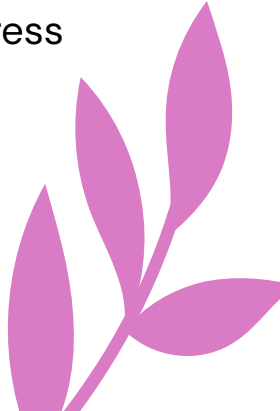

# Social Cause

Our main aim is to improve the **accessibility** and **affordability** of mental health services while promoting **overall well being** . SootheSpace strives to make mental health accessible to wider audience by leveraging technology such as teletherapy , augmented reality and virtual reality. It breaks down barriers such as geographical limitations, transportation issues and stigmas associated with seeking therapy. We also emphasize on holistic well being by incorporating augmented reality environments that act as mood uplifters. These environments promote relaxation, stress reduction thereby enhancing overall wellbeing.

An illustration on the left side of the slide shows a hand with a pink sleeve holding a yellow flower. The hand is drawing a blue brain shape. The background is white with blue and pink abstract shapes, yellow stars, and pink plus signs.

# Business Perspective

- We will be **partnering with corporates/ educational organizations and institutions** to make our app accessible to a wider group of people and increase scalability.
- Also, we will be generating revenue from **advertisements** as well as a cut from the **teletherapy and telemedicine services**, we provide. Practo 124 crore revenue in 2020.

Contd.

- **Data Analysis and Insights:** We will utilize the anonymized data collected from user interactions with the platform to gain valuable insights into mental health trends and patterns. Aggregate and analyze this data to generate reports or conduct research that can be sold to universities, research institutions, or mental health organizations.
- **Partnerships with Insurance Providers:** Collaborating with insurance companies to offer mental health services as part of their coverage. This can involve negotiating contracts to become an in-network provider, allowing users to access SootheSpace services at a reduced cost or with a higher reimbursement rate. This partnership can increase accessibility to a larger user base.

# Conclusion

SootheSpace envisions a world where mental health services are **accessible, affordable and empowering** for all . By leveraging technologies such as teletherapy, augmented reality and in future virtual reality environments , we aim to break down barriers and revolutionize the way individuals access and engage with mental health support. SootheSpace goes beyond providing services, it is an **advocate for mental health education and awareness**, it aims to eliminate stigmas , foster understanding and empower individuals to take charge of their mental well-being, it strives to a healthier and happier society. At last SootheSpace is a catalyst for change, a beacon of hope and partner in journey towards mental well being.

# Thank You!

We would like to thank our mentors – Mr.Parth and Ms.Mukhta for their guidance and support throughout this journey . Their mentorship has been instrumental in shaping our app. We are truly grateful for the time you have dedicated to us , offering constructive feedback and helping us reach our potential!
